

Motor1::setSpeedDir

Motor2::setSpeedDir

getSpeedForDir

```
graph LR; A[Motor1::setSpeedDir] --> C[getSpeedForDir]; B[Motor2::setSpeedDir] --> C;
```

The diagram illustrates a shared dependency or common functionality. Two separate methods, 'Motor1::setSpeedDir' and 'Motor2::setSpeedDir', are shown on the left. Both of these methods have a blue arrow pointing to a single, gray-shaded method box on the right labeled 'getSpeedForDir'. This suggests that both motor methods rely on or call the 'getSpeedForDir' function.
